

## **Senior Research Engineer / Midwest**

Midwest-based, multi-national glass manufacturing company seeks Senior Engineer for product development, product commercialization position.

Position duties focus on development of coating and drying processes for application of wet coatings onto rigid glass substrates. Coatings include solvent, aqueous and U.V. cure materials. Coating processes include slot-die, spray, curtain, meniscus and roll coat methods. Duties include development of process costs and capital estimates, process scale-up and product launch.

Qualifications / requirements include Ph.D. or M.S. degree in Chemical or Mechanical Engineering and 3+ years experience in developing wet coating processes.
